

Lalala

A Thai e-commerce marketplace where trust, payments, and reviews are enforced by code.

Pitch Context: Product for SEABW 2026 Hackathon and investor evaluation

Executive Summary

Lalala is a marketplace designed for Thai buyers and sellers who are underserved by traditional platforms. It combines a familiar shopping experience with on-chain USDT escrow on KUB Chain, verified-purchase-only reviews, and a transparent fixed fee model. The result is lower fees for sellers, stronger buyer protection, and higher trust for all participants.

The Problem

- Sellers on dominant platforms face high and opaque fees (typically 3–5%), delayed settlements, and platform policy risk.
- Buyers face fake/manipulated reviews and slow, uncertain dispute outcomes.
- Both sides must trust a centralized black-box system with little transparency.

Our Solution

- **On-chain escrow:** Buyer USDT is locked in smart contract escrow at checkout and released only after delivery confirmation.
- **Verified reviews by design:** Reviews are unlocked only for completed purchases; fake review posting is structurally blocked.
- **Fixed, transparent platform fee:** 1.5% is deducted automatically at release and is publicly verifiable.

How Lalala Works

- 1 Seller lists product in USDT
- 2 Buyer pays in USDT
- 3 Funds lock in KUB Chain escrow contract
- 4 Seller ships order
- 5 Buyer confirms delivery, then seller is paid instantly (minus 1.5% platform fee)
- 6 Both sides can leave verified reviews

Business Model

Revenue Stream	Description
Transaction Fee	1.5% fee on each completed order, collected automatically in USDT
Seller Subscriptions	Premium analytics/tools/support tiers for sellers
Featured Placement	USDT-based bidding for priority listing visibility

Why Now, Why Thailand

Thailand's e-commerce market is rapidly expanding toward a projected \$30B scale, while seller dissatisfaction with incumbent platform fees and policies remains high. At the same time, KUB Chain and Bitkub have already normalized wallet-based digital asset usage in the local market. Lalala leverages this readiness to deliver a practical, immediate trust upgrade to everyday commerce.

MVP Scope and Current Progress

- Authentication + wallet connect (buyer/seller roles)
- Product listing and browsing
- USDT escrow payment and release flow
- Verified review gating by completed order
- Buyer/seller dashboard fundamentals
- Basic dispute flag state

Expansion Roadmap

Phase 1: Thailand market fit and retention optimization. Phase 2: regional rollout to Vietnam, Indonesia, and the Philippines using the same trust primitives and operating model. Future modules include community arbitration, loyalty token utility, and deeper seller growth tooling.

Pitch One-Liner

"Lalala is a Thai marketplace where your USDT is protected by code, not customer service — lower fees, real reviews, and instant settlement on KUB Chain."
